

# Project proposal

- your names and Canvas IDs:

Valentin Quapil, 138128

Adrián Olmedilla Belinchón, 138129

William Tomczak, 94409

Gabriel Dalborg, 78331

- name of the app

BoredBord

- short description

The user can use the app to collect and save activities that he or she wants to do in the future. The user can ask activities in two ways: either manually, or use suggestions (from the [Bored API](#)). The user can filter the activities in multiple ways (price, number of persons, type).

- framework(s) that will be used

Vue.

- API that will be used

<https://www.boredapi.com/>

- what data will your app work with (which ones come from API and which one is your app specific)

suggestions for activities come from the api.

- quick mock-up/prototype (paper drawing is fine) of the screens your app will have

**Login page:**
